## L53AVT

### Avignon Swivel Tower

#### Installation Instructions

Please refer to reverse for dimensions.

***When handling the Tower, DO NOT lift the unit using the shelving rails. The railings will not support the weight of the tower.***

1. After unpacking the unit, install the Straight Floor Leg to the bottom of the Tower using 4 of the short screws. (Screws provided with hardware package.)
2. Repeat the same procedure for the 90° Wall Bracket which is installed at the top of the Tower. (Use the 4 remaining short screws.)
3. Place the Tower into position ensuring that the Tower can rotate 360° with no obstruction.
4. Level and plumb (horizontal and vertical alignment) the tower to the wall and floor surface and then mark the flange positions.
5. Three wood screws are provided for the floor flange. Three regular screws are provided for the wall flange.

***(Please note that that the wall flange must be installed to backing or a stud.)***
